Full-stack developer and AI enthusiast with experience building scalable web applications, blockchain systems, and machine learning solutions. Skilled in JavaScript, React, Node.js, Python, and cloud deployment. Experience mentoring 200+ students in programming and developing real-world projects including blockchain certificate verification systems and AI-powered applications. Strong background in SaaS analysis, backend architecture, and system design.

EDUCATION

Bachelor's in Computer Science (Honors), Asia Pacific University 2022 – 2025 | Kuala Lumpur, Malaysia
Diploma in Business Information Technology, Strathmore University 2020 – 2022 | Nairobi, Kenya

PROFESSIONAL EXPERIENCE

Web Developer and Trainer Assistant, Kidocode Sdn Bhd Jul 2024 – Jul 2025
Kuala Lumpur, Malaysia

- Developed full-stack web applications using React, Node.js, and Flask, implementing REST APIs and responsive interfaces.
- Mentored **200+** students in web development and programming fundamentals, increasing course completion rates by **30%**.
- Designed and launched **5+ new programming course modules**, reducing student drop-off by **25%**.
- Conducted SaaS business analysis to evaluate pricing models and market positioning, contributing to a projected **50% revenue growth over 3 years**.
- Collaborated with instructors and developers to test and deploy educational tools and coding projects.

Travel Agent and IT Support, Aragsan Travels 2018 – 2023 | Nairobi, Kenya

- Led IT operations including maintenance of **two internal servers** and company systems.
- Implemented digital tools that improved operational efficiency by **40%**.
- Provided technical support and resolved **80% of customer complaints within 24 hours**.
- Performed data analysis and reporting to support business decision-making.

TECHNICAL SKILLS

Programming Languages

JavaScript, Python, TypeScript, Solidity, Java, C++, C#, SQL, Rust

Databases

MongoDB, PostgreSQL, MySQL, SQLite

Blockchain

Solidity, Hardhat, Web3.js, Truffle, Smart Contracts

AI and Machine Learning

TensorFlow, OpenCV, Pandas, NumPy, Computer Vision, LLM Utilization, Advanced Prompt Engineering

Tools and Platforms

Git, GitHub, Firebase, Figma, AWS, Docker, Linux, REST APIs

Business Analysis

Strong grounding in accounting principles, economic analysis, and SaaS business evaluation. Experienced in financial forecasting, budgeting, market trend assessment, and optimizing product and pricing strategies.

Teaching and Content Generation

Proven track record in delivering engaging, results-oriented instruction in programming and web development. Skilled in designing curriculum, creating interactive learning resources, and adapting technical content for varied audiences and skill levels.

LANGUAGES

English — Native

Somali — Native

Swahili — Fluent

Arabic — Basic

PROJECTS

Machine Learning and Blockchain Based Certification System,

ReactJS, NodeJS, Python, Solidity, Hardhat, MongoDB

Designed and developed a blockchain-based academic certificate verification system using GoQuorum. Features include Solidity smart contracts for secure and immutable record storage, AI/ML-powered document classification, anomaly detection for fraud prevention, and real-time verification via Web3.js integration.

Cloud Based Diabetes Management System, C#, Razor Pages, AWS Elastic Beanstalk, AWS Lambda

Developed a cloud-based application for tracking and managing diabetes data, integrating Razor Pages for dynamic web interfaces. Deployed via AWS Elastic Beanstalk and AWS Lambda for scalable, serverless architecture. Implemented secure data handling and efficient backend logic to support patient record management.

Face and Hand Detection System, Python

Designed and developed a machine learning-based face and hand detection system for real-time interaction and security. Features include deep learning-based face detection, real-time hand tracking, and integration for authentication, gesture control, and human-computer interaction.

Club Management System, HTML, PHP, CSS, MySQL

Developed a web-based club management system using PHP and MySQL for secure member registration, profile editing, and a searchable directory. Features include event management and integrated communication tools, with HTML and CSS ensuring a user-friendly interface.

Image Editor, JavaScript

Developed a JavaScript-based image editing application for real-time photo manipulation. Features include filters, cropping, resizing, and drawing tools, with an intuitive UI for seamless user experience.
